8)
Aim:- To stimulate RIP (Routing Internet Protocol) using Cisco Packet Tracer and observe packet dynamic routing b/w different networks.

Procedure:

1. Open Cisco packet tracer
2. Place three networks routers and 2 PC
3. Connect three router in a triangular
4. Connect PC 0 to router 0
5. Configure the IP addresses for all router interfaces and PC's Enables the
6. Configure RIP on each routers using router RIP.
7. Advertise the directly connected networks
8. Verify the routing table test Connectivity using Ping

RESULT:-

Thus RIP was successfully stimulated using Cisco Packet Tracer, and dynamic routes selection and automatic rerouting were verified
