EXP:- 12 (a) Echo Client - Server using TCP

Aim:-
to implement an echo client - server application using TCP sockets and verify communication b/w the client and server

Procedure
1) Create a TCP Echo server using server socket and socket
2) Assign a port number to the server.
3) Compile and execute the TCP server program.
4) Create a TCP Echo client using socket
5) Connect the client to the server
6) Enter a message through the client
7) Display the echo real message at the client

RESULT:-
Thus the TCP Echo client - server application was successfully implemented and the client successfully recieved the echoed message from the server.

TCP Echo Server on port 5000
Client connected: 127.0.0.1:5...
recieved: Hi
Recieved: Hi

type message to send
hi
Server: hi
hi am Mohan

Program:-

```
import java.io;
import java.net.*;
Public class TCPEchoClient {
    Public static void main() {
        String host = "localhost";
        int port = 5000;
    Buffer reader in = new Buffer
    Print writer out = new Print
    Socket.getOutputStream();
while( Message = Keyboard.read
{
    String response = new.
}
Socket.close();
```
